

DATA RECORDING AND REPRODUCING APPARATUSABSTRACT OF The DISCLOSURE

5 A data recording and reproducing apparatus which can
easily perform the editing of audio and/or visual data
even at the camera site. In the data recording and
reproducing apparatus, a VTR portion and an MO disc
portion are integrally constituted. Audio and/or visual
data input from an outside apparatus is recorded on a
10 video tape by the VTR portion, and further reproduced
from the video tape and transferred to the MO disc device
at a high speed and recorded. The user of the data
recording and reproducing apparatus quickly finds the
desired video image by actively utilizing the random
15 access property of the MO disc device and sequentially
inputs the same to the VTR device, records the same on
the video tape, and performs the editing of the audio
and/or visual data.
